Regarding FCC ID: X2PAMPRF-1 with transmitter CRLU-201 and TRX-401

This letter will serve to provide answers to specific questions as requested. See below for details;

- 1- CRLU-201 and TRX-401 similarities- These two pieces of equipment are identical except the CRLU includes an additional board that provides analog to digital conversion between our Integrated Base Station (IBS) and the RF transmitter. The RF board, controller board, power supply and housing are the same in both products.
- 2- Two FCC IDs- The original submittal for FCC approval was initiated by Cooper incorrectly. These products should have been submitted and approved using only one FCC ID. Since this took place in the past and since the current format works for our customers we see no return on investment to go back and address this issue. Therefore we still plan to utilize the two separate FCC IDs when the RF amp is not used.

I hope this clarifies any and all outstanding items required to complete this program. Please do not hesitate to contact me if you have any further questions or concerns.

A handwritten signature in black ink, appearing to read "Leon Newsome". The signature is fluid and cursive, with a long horizontal stroke at the end.
